

SURVEY OF MANPOWER AND EMPLOYMENT STATISTICS.  
(Including Numbers in Armed Forces)

MAY, 1943.

NOTE: (1) As this memorandum contains secret data as to Defence forces and total manpower position, its circulation is limited to a small list of officers who have occasion to use it. Numbers in defence forces must not be published in any way and the document must be carefully safeguarded.

(2) The statistics herein are as at the end of May, 1943. Future issues will appear about eight weeks after the end of the month to which they relate.

Summary of Contents

1. Employment and Enlistments.
2. Employment (excluding Rural and Household Domestic).
3. Summary of Manpower Statistics - Australia.
4. Summary of Manpower Statistics - States.
5. Defence Forces.

1. Employment and Enlistments: The following table shows, as at the end of July, 1939, July, 1941, November, 1941 and each month from May, 1942 to May, 1943, the estimated number of persons employed as wage and salary earners in industry (excluding rural and household domestic) and the net enlistments in the defence forces since the commencement of the war. "Net Enlistments" represents the net number of persons taken into defence forces and not subsequently discharged into civil life.

Australia - Wage Earners Employed in Industry and  
Total Net Enlistments in Defence Forces.

End of Month	Wage earners employed in industry (exclud- ing rural and house- hold domestic) (a)			Total Net Enlist- ments in Defence Forces (b)			Total (excluding wage earners in rural industry and house- hold domestic service)

(a) Includes employees of Allied Works Council and Allied Governments, in addition to all other workers engaged in production of war materials and services. A.W.C. employees first appeared in May, 1942 and numbered approximately 48,000 in May, 1943.

(b) See Section 5 of this Survey for fuller details of these figures. They represent "Gross Enlistments" less discharges and include dead, missing, prisoners of war and wounded.

The main features of the May figures may be summarized as follows:-

Males: The total number of males employed in industry (excluding rural) or enlisted in the defence forces increased steadily from November 1941 until June 1942 at an average rate of 23,800 per month, but thereafter increased by only 21,300 in eleven months. The figures for recent months reflect the position now being reached in which difficulty is being experienced in obtaining more men from other sources, namely, rural workers, unemployed, independents and men usually occupied as employers or self-employers. The intake into the forces in May was 4,000, but industry was practically unchanged compared with the previous month.

/Females

Females: Total females employed in industry (excluding rural and household domestic) and in the defence forces increased by only 2,500 in May following an increase of 2,300 in April. The monthly increase during the twelve months ended May, 1943, averaged 5,400. The number of females taken into the forces in May was smaller than usual and civil employment of females only increased slightly compared with the previous month.

2. Employment (excluding Rural and Household Domestic): The numbers of persons employed in July 1941, November 1941 and each month May 1942 to May 1943 (as shown in the first three columns of the previous page) are dissected in the following table into four main groups of employment.

(a) Allied Works Council employees are included with "Other Governmental" or "All Other" according to whether they were working for Governmental authorities or private contractors. The increase in "Other Governmental" from April to June, 1942 is due to the inclusion of these men, but the subsequent decline of the "Other Governmental" figures for males shows that the necessarily large increase of public employment for war purposes has been offset by curtailment of the numbers of males in less essential governmental activities. Employees of Allied Governments are also included with "Other Governmental".

The figures at the foot of the table show absolute amounts (in thousands), and percentages, of increase in employment since the end of November 1941, indicating the trend of employment in various groups since war was commenced in the Pacific. Munitions, Aircraft and shipbuilding have shown a steady growth in the figures for both sexes. Male employment in munition factories increased rapidly until July 1942, but after that date, the monthly increase slackened off, and in May 1943 there was a small decrease in men engaged. Female munition workers continued to expand, and in May 1943 were 255 per cent. above the November 1941 level. Male workers in other factories and workshops were increasing when war with Japan started, but, with the exception of seasonal increases during recent months, have declined slowly from the November 1941 peak. The loss of 33,800 workers since November 1941, representing 7 per cent. of their number at that date, is slightly in excess of the number of male factory workers absorbed by the munition works. (Of course a very large proportion of the factory workers remaining have been transferred to war contracts.) Female workers in other factories and workshops have remained very steady since November 1941 but showed small seasonal increases in February and March. Governmental services other than munition works increased slightly until April 1942, but the large increase in May 1942 was due to the inclusion of such Allied Works Council employees as were working directly for Governmental authorities. Since May 1942, this group has decreased by 12,500. The number of females in Government services has increased fairly steadily, and in May 1943 stood at 44 per cent. above the November 1941 level. Males in "all other industries" reached a peak in September 1941, and the decline in subsequent months placed May 1943 at 22 per cent. below November 1941. This fall has meant the releasing of 118,000 men for the Armed Forces. Females in "all other industries" showed a slight tendency to increase until April 1942, but remained fairly steady after that date.

/Summing

Summing up, it may be said that from November 1941 to May 1943, munition etc. works required 32,200 extra men and other Governmental activities, 7,500 extra men, while other factories and workshops released 33,800 men, and all other industries released 118,200 men. As to females, munition etc. works required 28,600 and Governmental services 29,300 extra women, while female employment in other industries, including factories, was very little changed.

3. Summary of Manpower Statistics - Australia: The following table shows for May 1943, the number of males and females enlisted in the Defence Forces, those engaged as wage or salary earners in civil occupations other than rural and household domestic pursuits, and unemployed wage and salary earners. Comparison of the changes in each of these groups from pre-war conditions (July 1939) and from November 1941 is also made. The three centre columns show figures for the complete period since the commencement of war, while the three right hand columns show that part of the change which has occurred since the entry of Japan into the war.

Australia - Summary of Manpower Statistics as at May, 1943.

Notes to above table:

(i) Defence forces include enlistments since the commencement of war only. Fuller details are given in Section 5 of this summary. The relatively small number of permanent forces are included in "other" wage and salary earners employed - Item (ii) of above table.

(iii) Unemployed wage and salary earners include all those not in employment on account of sickness, accident, unfitness, and lack work. Sickness and accidents are responsible for over 40,000 of the total unemployed shown above. The figures are approximate estimates only, as no exact records are available.

(iv) Normal increase in wage and salary earners is the estimated increase in the number of available wage and salary earners which would have been expected had the trends of recent pre-war years been continued. Inter-state migration which actually occurred since July 1939 has however been taken into account as far as possible, adjustments for back months being taken into account as records become available.

(v) "Not gainfully occupied" groups include independents, retired persons, women previously not gainfully occupied, children who commence wage-earning earlier than they would in normal times, and persons who delay their retirement from wage-earning occupation.

It will be seen that since July 1939, 722,000 persons have been absorbed by the defence forces while 158,800 have been absorbed into industries other than rural and private domestic service. This total of 880,800 has been drawn from (a) unemployed wage and salary earners, the decrease of whom has contributed 252,900 persons; (b) normal increase of wage and salary earners amounting to 104,800 persons, and (c) persons not gainfully occupied, (including retired persons who have become wage earners and wage earners who have delayed retirement), employers and self-employed persons who have become salary and wage earners, and rural and private domestic wage earners who have entered the forces or transferred to other industry. This latter group has contributed 523,100 persons.

Men engaged in the Forces and Industry have increased by 656,600 and women by 224,200 since the outbreak of war. The males were obtained from the following sources:- unemployed, 235,000; normal population increase, 68,600; and drawn from rural industry, self-employed, and "independent" persons, 353,000. Of this latter group it is estimated that approximately 87,000 came from rural wage earners, 58,000 from other rural workers, 123,000 from employers, workers on own account, and helpers, and 85,000 from males who would not otherwise have been gainfully occupied. All the increase went into the Forces with the addition of 22,100 released by industry. The females came principally from unoccupied women and women in private domestic service (and a few self-employed), 170,100; while normal increase yielded 36,200, and unemployed 17,900.

The next table summarizes the salient features of the foregoing analysis for males and females separately in three periods (a) July 1939 to November 1941 - the period of war prior to the entry of Japan (b) November 1941 to November 1942 - the first twelve months of the Pacific War and (c) the first six months of the second year of war in the Pacific.

Particulars	Total for each Period			Average per month		
	July 1939 to Nov. 1941 (28 Mths)	Nov. 1941 to Nov. 1942 (12 Mths)	November 1942 to May 1943 (6 Mths)	July 1939 to Nov. 1941 (28 Mths)	Nov. 1941 to Nov. 1942 (12 Mths)	November 1942 to May 1943 (6 Mths)

(c) Drawn from other groups(b)	85.5	59.7	24.9	3.1	5.0	4.1

(a) See explanation of net enlistments in Section 5 on page 6 hereof.

(b) As defined in (v) in table on preceding page.

During the first period of the war, males engaged in the Forces and Industry were increasing at an average rate of 16,700 per month; the monthly increase fell to 14,500 in the first year, and to 2,300 in the first six months of the second year of the Pacific War. Entries into the Forces, however, averaged 13,500 monthly for the first period, rose to 22,300 in the first year of Pacific War, but averaged only 4,500 in the subsequent six months. Diminishing unemployment was yielding 6,800 monthly in the early part of the war, fell to 3,600 per month during the first year of the Pacific War, but is now negligible. Men drawn into the Forces and Industry from other groups at first averaged 8,300 monthly, rose to 9,700 in the 12 months after Japan entered the War, and fell to 800 for the six months ended May, 1943.

Women commenced to be recruited for the Forces about the middle of 1941. They averaged only 800 per month from July to November 1941, but in the next 12 months averaged 2,200 per month, and in the six months December 1942 to May 1943, again averaged 2,200. Those entering industry averaged about 4,000 each month prior to November 1941, during the next 12 months they averaged 3,900, and in the six months December 1942 to May 1943 averaged 2,800. The largest source of additional female labour was from unoccupied women, women engaged in private domestic service, and employers and self-employed women. This source provided 3,100 per month in the early part of the war, 5,000 per month in the 12 months after November 1941 and 4,100 per month during the six months ended May, 1943.

4. Summary of Manpower Statistics - States: The chief items in the table on page 3 are shown separately for States in the next table.

States - Summary of Manpower Statistics as at end of May, 1943.

(a) Including Australian Capital Territory.

(b) Including Australian Capital Territory and Northern Territory.

The number of persons estimated to have been drawn into the forces and industry (excluding rural and household domestic) from other groups, as shown in the last part of the above table, was 353,000 males and 170,100 females, as at the end of May, 1943. Males increased by 2,100 and females by 1,700 compared with April, 1943.

The last part of the foregoing table gives some indication of the extent to which available man- and woman-power has been drawn upon in the various States. Per 1,000 male or female population, the numbers of persons who entered the defence forces or industry from not gainfully occupied groups, employers, and self-employed, and rural and private domestic wage-earners are estimated as follows:-

State	July 1939 to May 1943 (Whole War Period)		July 1939 to November 1941 (Before Pacific War)		November 1941 to May 1943 (Pacific War Period)	
	Males	Females	Males	Females	Males	Females
New South Wales	87.5	55.5	52.4	33.5	35.1	22.0
Victoria ..	91.9	45.5	74.4	28.8	17.5	16.7
Queensland ..	106.2	35.1	56.6	2.9	49.6	32.2
South Australia	147.4	63.8	91.0	26.8	56.4	37.0
Western Australia	125.5	44.9	96.9	5.0	28.6	39.9
Tasmania ..	125.4	44.7	83.0	13.8	42.4	30.9
AUSTRALIA:	100.3	49.4	66.1	24.8	34.2	24.6

These figures indicate the strain on manpower in South Australia during the Whole War Period, and in Western Australia in the early war period when voluntary enlistments in that State were relatively high.

In the period before war commenced in the Pacific, diversion of males was highest in Western Australia and South Australia. In New South Wales and in Queensland the rate of diversion was low. For the whole war period the diversion of males has proceeded farthest in South Australia, Tasmania and Western Australia.

During the early part of the war, the diversion of women into industry was greatest in New South Wales, Victoria and South Australia, while Queensland and Western Australia had done practically nothing to engage extra women. During the period since Japan entered the war, the rate of diversion for women was higher in Western Australia than in any other State at the end May, 1943. At the end of last January, South Australia was slightly ahead of Western Australia. However, it is clear that these two States have shown greater relative movement of women into the Forces and Industry than any other State in the period since war started with Japan.

5. Defence Forces: The numbers of persons enlisted in the defence forces since the commencement of war are summarized from official records in the following statement. The gross enlistments are shown in the first column while the second column represents the net number taken into defence forces and not discharged. It includes deaths, missing, prisoners of war and wounded. This total is the significant figure for manpower purposes and has been used in the preceding tables. It shows the net extent to which the defence forces have drawn men and women from civil life. Actually it may be a little understated, as some of the persons included as discharges are probably incapacitated, and not fit to resume civil occupations.

#### TOTAL DEFENCE FORCES - AUSTRALIA

Enlisted from commencement of War to 31st May, 1943.  
(Full-time continuous duty)

Services		Gross Enlistments	Net Enlistments
<u>MALES</u>			
Military - A.I.F.(a)	..	387,712	343,564
Militia (including Garrison)(a)	..	267,475	174,402
V.D.C.	..	4,575	3,359
Air - R.A.A.F.	..	146,368	130,788
Naval - R.A.N. and R.A.N.A.S.	..	29,408	26,614
<u>TOTAL MALES:</u>		835,538	678,727
<u>FEMALES</u>

Air - W.A.A.A.F.	..	18,622	16,072
R.A.A.F. Nursing Service	..	364(b)	364
Naval - W.R.A.N.S. and R.A.N.N.S.	..	1,286	1,286
<u>TOTAL FEMALES:</u>		47,442	43,282

(a) These figures allow for transfer from Militia to A.I.F. units.

(b) Approximate, subject to revision.

The largest increase during May in the net figures for males occurred in the R.A.A.F. (2,400). The A.I.F. total increased by 13,800, but this was apparently chiefly due to transfers from the Militia, as the total of the A.I.F. and Militia together was only 800 higher than in April. The Navy was increased by 900. Amongst females, the most important change was an increase of 1,000 in the net number of A.W.A.S. while the A.A.M.W.S. and the Naval Women's Services increased by 300 and 200 respectively.

The total numbers enlisted in all services from each State were as follows:-

NET ENLISTMENTS TO 31ST MAY, 1943.

State	M a l e s		F e m a l e s	
	Number	Per 1,000 male Population at 30/6/39	Number	Per 1,000 female Population at 30/6/39
New South Wales (a) ..	255,896	183.9	15,496	11.3
Victoria ..	181,818	195.7	11,018	11.6
Queensland ..	94,402	177.5	6,821	14.1
South Australia ..	60,622	203.5	3,473	11.7
Western Australia ..	63,803	260.7	5,084	23.0
Tasmania ..	21,380	177.1	1,389	11.9
<u>AUSTRALIA: (b)</u>	678,727	192.9	43,282	12.6

(a) Including Australian Capital Territory.

(b) Including Australian Capital Territory and Northern Territory

The net enlistments shown above have been given for States of enlistment as far as possible. Military figures, however, are recorded in Military Districts, which although practically identical with States, differ appreciably in two cases, viz., the South Western border district and the Broken Hill district of New South Wales are included with 3rd (Victoria) and 4th (South Australia) Military Districts respectively. In the above table, a proportion of the Victorian and South Australian enlistments, based on the total population in the areas in question, has been transferred to New South Wales.

The outstanding feature of the rates at the end of May, as in earlier months, was the relatively high enlistments in Western Australia, both for males and females. Amongst males, South Australia and Victoria came next, while the other three States supplied relatively fewer enlistments. Female recruits were relatively twice as numerous in Western Australia as in the other States, but there was little difference in the enlistments from the five remaining States.

Males in the Forces are now equivalent to one out of every two men aged from 18 to 40, and females to one out of every thirty women aged 18 to 40. In Western Australia, the males in the Forces are approaching three out of every four men between 18 and 40 years.
